SUMMARY

Computer Science undergraduate (2027) with strong foundations in full-stack development, REST API design, and database engineering. Hands-on experience building and deploying web applications on AWS, designing CRM automation workflows in GoHighLevel, and creating AI-powered process automation using n8n. Currently architecting a self-serve ERP platform for small and mid-scale businesses, covering HR, inventory, supply chain, and financial operations. Comfortable across the full stack — PostgreSQL schema design to React dashboards — and experienced using AI tools to accelerate delivery without compromising code quality.

TECHNICAL SKILLS

Languages: Java (OOP), JavaScript, SQL, HTML, CSS

Frameworks & Tools: Spring Boot, React.js, Hibernate, JDBC, Maven, Redux Toolkit, React Query

Databases: PostgreSQL, MySQL, Redis (caching)

Cloud & DevOps: AWS (EC2, S3, RDS), Docker, Git, GitHub, GitHub Actions (CI/CD)

Messaging & Async: RabbitMQ / Kafka (event-driven inter-module communication)

Automation & CRM: n8n (workflow & AI agent design), GoHighLevel (funnels, pipelines, email/SMS automation)

Core CS Concepts: Data Structures & Algorithms, DBMS, OOP, REST API Design, System Design, Clean Code

Dev Tools: VS code, IntelliJ IDEA, Postman, Claude Code

PROJECTS

Business ERP System · In Progress *Mar 2026 – Present*

Full-Stack · Spring Boot (Microservices) · React.js · PostgreSQL · Redis · RabbitMQ · Docker · AWS

Architecting a self-serve, modular ERP platform that gives small and mid-scale business owners the operational tools of a large enterprise — without needing an IT team or technical background. Each module is independently deployable and toggleable, so businesses adopt only what they need.

Core Modules Being Built:

- ▶ **Dashboard & Analytics** — Role-based home screen with KPIs (revenue, stock levels, headcount, pending orders) rendered using Recharts; data aggregated via PostgreSQL views and cached in Redis
- ▶ **HR & Payroll Management** — Employee records, attendance tracking, leave approvals, payroll calculation with deductions — all configurable by the business owner through guided UI forms
- ▶ **Inventory Management** — Real-time stock tracking per SKU, low-stock alerts, multi-location warehouse support, and product categorization with batch/serial number tracking
- ▶ **Supply Chain & Vendor Tracking** — Purchase order lifecycle (draft → approved → received), vendor performance history, goods receipt notes, and automated reorder triggers when stock thresholds are crossed
- ▶ **Sales & Invoicing** — Quotation-to-invoice workflow, GST-compliant invoice generation, payment status tracking, and customer ledger with aging reports
- ▶ **Financial Reporting** — Profit & loss summary, expense categorization, cash flow view, and exportable reports — built from transactional data across all modules
- ▶ **Self-Setup Wizard** — Guided onboarding flow where business owners configure their company profile, activate modules, and define basic rules (tax rates, leave policies, reorder levels) with zero technical knowledge required

CodePulz · Online Code Compiler *2025*

Full-Stack Web Application | Spring Boot · React.js · Hibernate · MySQL · AWS EC2 · Docker

- ▶ Built a web app where users submit code compiled and executed in an isolated environment on AWS EC2, with output returned to the React frontend in real time

- ▶ Designed RESTful APIs with Spring Boot; used Hibernate ORM for user session and execution history persistence in MySQL
- ▶ Containerized the execution engine with Docker to provide sandboxed runtime environments and prevent resource conflicts between concurrent users

GitHub: github.com/Syedowais381/CodePulz

AI Agent Automation Workflows²⁰²⁵

Automation Engineering | n8n · REST APIs · Webhooks · LLM Integration

- ▶ Built multi-step AI agent workflows in n8n to automate business processes including lead qualification, data extraction, and conditional notification routing
- ▶ Connected third-party APIs, webhooks, and LLM inference nodes within n8n to create end-to-end pipelines that process inputs and take actions without manual intervention
- ▶ Designed workflows with error-handling branches and retry logic to ensure reliability across asynchronous automation steps

CRM Automation & Sales Funnels · GoHighLevel²⁰²⁵

CRM & Marketing Automation | GoHighLevel · Workflow Builder · Email · SMS

- ▶ Built automated lead nurture sequences using GoHighLevel's workflow engine, triggering personalized email and SMS follow-ups based on contact behavior and pipeline stage
- ▶ Designed multi-step sales funnels integrated with GoHighLevel's calendar, form builder, and CRM contact flows — reducing manual follow-up effort for clients
- ▶ Configured pipeline automation rules and tagging logic to segment leads and route them to the correct follow-up sequence automatically

DDOS Attack Tracking Simulation²⁰²⁵

Full-Stack Application | Spring Boot · Java Swing · MySQL

- ▶ Engineered a real-time simulation tool to generate, track, and visualize DDOS attack data — including traffic volume, attack vectors, and mitigation state
- ▶ Designed MySQL schema for attack event storage; used aggregate queries to surface patterns and anomaly summaries in the dashboard

GitHub: github.com/Syedowais381/DDOS_Attack_Tracking_Simulation

Consultancy Business Website²⁰²⁵

Frontend Project | React.js · Component Architecture · Client-Side Routing

- ▶ Designed and built a responsive, multi-page frontend for a consultancy business — applying modern UI/UX principles, reusable component design, and React Router for navigation

GitHub: github.com/Syedowais381/Consultancy

EDUCATION

Bachelor of Engineering, Computer Science^{2023 – 2027 (Expected)}

PDA Engineering College, Kalaburagi, Karnataka

Relevant Coursework: Data Structures & Algorithms, Database Management Systems, Object-Oriented Programming, Web Technologies, Operating Systems

ACHIEVEMENTS

- ▶ Solved 150+ Data Structures & Algorithms problems on LeetCode, with focus on array, graph, and hash map patterns
- ▶ Strong command of Java Collections (List, HashSet, HashMap) — applied to optimize time and space complexity in both competitive and project contexts

- ▶ Independently designed, built, and deployed full-stack projects spanning REST APIs, cloud infrastructure, CRM automation, and AI workflow pipelines
